

The seven intelligences

by Eduard Martí

THE SEVEN INTELLIGENCES

BY EDUARD MARTÍ

118 pages

Psychology / Personal Development

■ A different perspective on the seven multiple intelligences which Howard Gardner had begun to study.

SYNOPSIS

The author maintains that each individual, throughout their lives, is capable of developing different intelligencies, each one dealing with specific contents but vital for adaptation; musical, body, spatial, the world of objects, numbers, language and the emotions.

A new vision of multiple intelligencies which offers answers to these questions:

- Until what point is school performance a guarantee of professional success?
- Are we born intelligent?
- Are the emotions far removed from intelligence?
- Can intelligence be nurtured?
- What role does self-esteem play in intelligence?

ABOUT THE AUTHOR

Eduardo Martí Sala (Barcelona, 1950) is professor in Evolutionary Psychology and Education at Barcelona University.

He read for his doctorate at Geneva University and collaborated with Jean Piaget at the International Centre of Genetic Epistemology. His research centres on child development and school learning.
